A reliable partner at your side

The life blood of a modern public or commercial buildings is the functionality and reliability of the system solutions for communications, building automation, power supply, safety and lifts. This is true of any such construction, irrespective of whether it is an office block, hotel, sports stadium, television studio or a tunnel. Choose a reliable system partner right from the start.

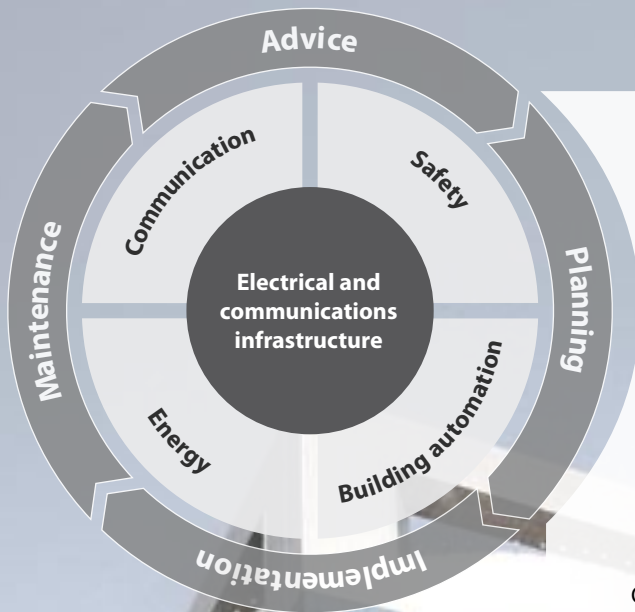

Choose Datwyler!

Datwyler is a highly regarded company about to celebrate its 100th year of operation. With the backing of a financially powerful group, Datwyler operates on the international stage as a successful supplier of total solutions for the electrical and communications infrastructure of buildings and for FTTx networks. We lead the way in innovations for applications such as information and communications technology, power supply and safety, building automation and lifts.

Our systems are reliable and constitute a secure investment on your part. This is all thanks to the years of experience and proven expertise of our engineers and technicians. Datwyler is a one-stop source of customised solutions for all your specific applications – as attractive total solutions, with all the necessary test certificates, authorisations and certificates and with long-term warranties.

Our workforce prides itself on delivering a full package of services for all the products and solutions supplied by the company. You can rely on our expert support for all aspects of our supply – beginning with planning, consultancy, through pre-assembly, logistics, installation and ending with system maintenance.

Turnkey installations

Datwyler does not only supply integrated total solutions, but has positioned itself successfully as a turnkey partner: for all manner of purpose-built constructions including multi-site projects and for FTTx projects. Our successful processing of turnkey projects derives from our high-level skills in developing and manufacturing the required products and solutions, our comprehensive applications expertise and the international scope of Datwyler activities.

Our international presence and our worldwide, actively managed and certificated partner network have also proved invaluable in the multi-site projects of major clients. National and international companies rely on Datwyler on-the-spot site audits. Using the site audits as a base, our engineering experts work out customised solutions with uniform standards for all the sites concerned. Our total solutions package is rounded off by the implementation and assurance of regular operations. While operations are running, we provide servicing and maintenance work to optimise your infrastructure solution. These MAC (move, add, change) services increase the performance and working life of your equipment.

Worldwide expertise in turnkey creation, multi-site projects and services

High-quality solutions for all your applications

Year on year, Datwyler invests in even better materials and process technologies, production resources and test methods. This is why our system solutions always keep ahead of the current norms and repeatedly set new standards. The important functions which our solutions must deliver in practice demand the highest possible level of safety and reliability. This is why we measure each product against stringent quality standards before it leaves the company. Of course, all our processes are ISO 9000-2001/14001 certified.

Opt for sustainable solutions that provide you with high-level operational reliability coupled with low operating costs. The proof that Datwyler systems can deliver these benefits has been evident for many years in thousands of installations around the world. In addition, we have a particularly keen eye for consistent, intelligent solutions that simplify planning, sourcing and installation and shorten your construction times.

We have the right total solutions for all your applications, whatever they are – high-speed communications networks, modern energy distribution, monitoring and control duties, fire alarm systems or lift cabling. Or you may want to integrate new systems, interconnect and automate existing systems or simply ensure a reliable power supply. All this is possible with our carefully thought out, pre-assembled and prefabricated subsystems.

Just tell us how, when and where

Besides quality and product price, the logistics performance capability of suppliers is a decisive factor in the successful handling of construction projects. This is particularly true of major projects. With its years of experience and high logistics competences, Datwyler can handle even time-critical major projects smoothly and to the complete satisfaction of customers. Just-in-time deliveries at the right place are all in a day's work for us and our partners.

Besides delivering straight to the construction site, we also offer you additional logistics services (time slots, pre-fitted and pre-assembled products etc.). Many customers and suppliers have a direct link to our IT system for rapid and flexible order processing.

As regards cable pre-assembly, Datwyler also has wide-ranging expertise, the product of decades of experience. In our modern cable cutting centre, the engineering department passes the cutting orders electronically without any media discontinuity straight to the production area. Our efficient order communication system with all our customers is due to years of experience with B2B interfaces.

In the growth markets of Eastern Europe and the Middle East, and in many other countries as well, Datwyler works in close co-operation with independent distribution partners. Customers can rely on the consistently high quality standard of all Datwyler products and solutions whilst benefiting from local contacts and logistics services.

We support you in realising your infrastructure project – reliably, capably, complete and with the highest quality!

Fiber to the Home (FTTH)

Fibre to the Home (FTTH)

Over the last ten years, demand for bandwidth and the accompanying expansion of bandwidth in industrialised countries has increased ten-fold. The move from traditional, analogue TV consumption to individual digital television, Video on Demand, online gaming and Voice over IP means that copper is gradually approaching its physical capacity limits over the last mile. Glass will replace copper over the last mile – this is being called the ‘last infrastructure revolution in telecoms’.

Interest in Fibre to the Home (FTTH) projects has therefore grown steadily both in Europe and worldwide. Prominent flagship cities are Amsterdam, Västerås, Vienna and Zurich. Due to the great complexity and multi-dimensional nature of FTTH projects during the planning, implementation and operating phases, the companies involved must have in-depth expertise in a wide range of disciplines including the business management, legal and technical fields. Great attention must be paid to the development of business cases in order to ensure that investors enjoy long-term financial success.

In many countries, energy supply companies and local utility companies have a crucial part to play in FTTH projects. They are the companies with access to the basic infrastructure which must be used if the high investments are to be kept within reasonable bounds. In addition to this, topics such as Smart Metering and Smart Grid are becoming increasingly important to both groups. It is relatively easy to integrate these technologies during FTTH installation.

Complexity of FTTH projects

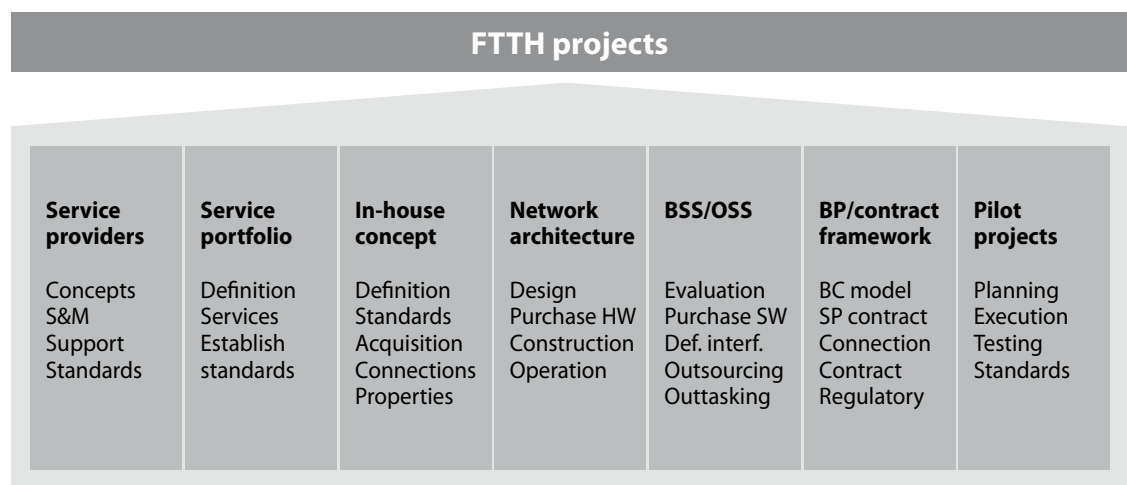

The FTTH network provider will face a wide range of challenges which will vary according to the strategy selected. For example, there is the question of whether the company itself should provide a service to customers, including triple play services, or make the infrastructure (optical distribution network) available to one service provider or several.

The aspects listed clearly indicate that a large number of disciplines are involved in an FTTH project.

The core elements of successful FTTH projects are:

- Business model and business plan
- Service portfolio
- Collaboration with telecoms service providers
- 'Reeling in' the building owner, including building acquisition
- Drafting of contracts with service providers and end customers
- Conceptual network design, in-house/outdoor
- Survey of the existing infrastructure (routes, pipes, building connections, etc.)
- Availability of expertise, resources and organisation
- Establishing and evaluating business and operation support systems (BSS/OSS)
- Carrying out a pilot/reference project
- Process optimisation, eliminating work stages, cost optimisation
- Roll-out in the planned area
- Maintenance and servicing of the FTTH infrastructure

FTTH projects

Passive network infrastructure

Standardisation of work/process stages

Purchasing

The Datwyler solution

Datwyler realised the complexity of FTTH projects at a very early stage and developed a range of solution concepts which it has implemented successfully when planning and carrying out a variety of projects, both in Switzerland and internationally. It has become clear that standardisation and modularisation offer excellent possibilities for completing projects cost-effectively on an optimum time-scale.

With its wealth of project experience, Datwyler can support energy supply companies and local utility companies at every stage of a project. Datwyler has also proved that it is capable of taking on full responsibility for a project if required.

As a leading provider of high-quality total solutions for FTTx network infrastructure, Datwyler sees its task not only as providing support through products and conventional consultancy services. Its experience also makes it a specialist in implementing FTTH projects on the ground.

The Datwyler FTTH portfolio includes:

- Turnkey infrastructure solutions from one source (as a general contractor)
- Business model preparation, business case validation and planning
- Telecom service level definition and development
- Clarification of the regulatory framework
- Strong partnerships with the leading technology providers in the FTTH field
- Consideration and use of local partners during implementation

Our FTTH solutions are modular. The customer can assemble an individualised package of relevant services. This applies to all three phases of an FTTH project: planning, execution and maintenance.

With its own engineering and service organisation and its existing network of highly qualified, certified partners, Datwyler can execute all aspects of turnkey FTTH projects in the role of a total or full service general contractor. Customers may also prefer to appoint Datwyler to execute individual modules within an FTTH project.

Key factors for your success

In FTTx projects both the choice of concept and the selection of suitable components should be guided by local conditions. The key factor is the type of development area, i.e. urban or rural.

“Green field” or “brown field”

Brown field is an area on at least part of which an infrastructure is already present. Here existing pipes have to be integrated into the design or new sub-pipes need to be laid. Datwyler recommends microtubes for in-pipe installation. Green field, on the other hand, is the name for an unbuilt area which will incorporate a new infrastructure. For reasons of cost it is advisable to rule out sub-pipes here and to plan direct-buried cable systems. Hollow cables from Datwyler suit this requirement: their sheath structure conforms to a cable design which has been tested for longitudinal and transverse leakage and has been well proven for decades.

The siting of technology centres (POPs)

Each chosen POP location should be central so that as many point-to-point connections as possible can be established without an intermediate distribution frame. If the POP locations are defined, further planning needs to cover average supply length and maximum individual length. The following is a rough guide:

Brown field – from POP to household an average of roughly 350 m and a maximum individual length of 800 m: The hollow cables mentioned above are ideal for this purpose, fitted, for example, with 24 pcs. 3/5 mm (internal/external diameter) tubes.

Green field – from POP to household an average of more than 350 m and individual ranges of over 800 m for more than 10% of households: Datwyler’s microtubes are recommended here, carrying a maximum of 7 10/12 mm tubes.

In an urban development, therefore, 24 individual pathways are available for each hollow cable, 7 tubes in a rural area. It is advisable to set aside approximately 15% of the tubes as spares.

The right concept, the right products and an experienced partner by your side

Cell division (cluster creation)

Household tube allocations are drawn up at the planning stage. Thus, for example, a trunk cable is planned for every 20 households (24 individual pathways, of which 4 are reserves). All the hollow microcables run to the POP and are logically numbered. Distribution closures are installed as tube distributors. Y-diverters and distribution closures from Datwyler are ideal for this purpose: connectors are used to provide individual tubes with a pressure-resistant joint (10 bar).

The ODF (Optical Distribution Frame)

The choice of an ODF depends on your concept, the anticipated packing density and take-rate (subscribers = active ports). In an urban development each of the 20 individual tubes may carry up to 12 fibres. In a rural development 6 individual tubes (1 = reserve) may carry 144 fibres each. An ODF of considerable size may therefore be required! Selection of the right components depends on fibre concept and quantity. ODFs, unilan® racks and distribution panels from Datwyler are an excellent choice for all these requirements.

Household termination

Datwyler's FTTx household distributors were specially developed for passive OWG household ter-

mination. A gas-tight connector can be integrated with each distributor. For house-front mounting we also supply solutions which can be customised to suit any given situation.

Residential cabling

As a rule a new building incorporates a viable, modern standard-compliant star-shaped hollow pipe installation. In older buildings, however, one often has to contend with a tightly dimensioned pipe infrastructure generally laid in a daisy-chain configuration, if not a surface-mounted installation. For all these requirements Datwyler can supply special modular products which are hard-wearing enough for heavy-duty residential use.

Among others these include our flush- and surface-mountable hybrid socket, which can be fitted as a modular component, and thin in-house cables with bend-optimised fibres which are ideal for installing in ducts and pipes. Where customer end devices need to be connected with patch cables we supply steel-reinforced OWG patch cables which will withstand heavy loads and have a predetermined breaking point designed to give if you trip over them, thus preventing injury or damage.

Product information

Application

For use in the carrier sector for backbone solutions and distribution networks
The intelligent cable management system allows trouble-free horizontal and vertical cable routing
Bend radius control on all routing path
Cable entry possible from bottom and top

Dimensions

19" / 47 U, H x W x D: 2200 x 1200 x 800 mm
19" / 47 U, H x W x D: 2200 x 1200 x 400 mm

Delivery

- Pre-assembled
- Without doors or walls

Description

- Base frame material of 2mm galvanised steel powder-coated RAL 7035
- Weight approx. 170 kg
- Equipped with 4 height-adjustable pedestals and 4 floor-mounting brackets
- Depth profile variably mountable
- Earthing set pre-assembled
- 400 mm version is equipped with 24 semi-circular and 4 circular aluminum bend radius control cones
- 800 mm version is equipped with 48 semi-circular and 8 circular aluminum bend radius control cones
- Further cable management and cable divider to be purchased separately (see page 19)

unilan® 19" network rack

Professional network solution with:

- 2 point locking
- Two 19" levels (both in front and behind)
- Installation height 42 rack units
- Protection category IP20
- Load 700 kg

Dimensions

19"/42 U, H x W x D: 2100 x 800 x 800 mm

19"/42 U, H x W x D: 2100 x 600 x 800 mm

19"/42 U, H x W x D: 2100 x 600 x 600 mm

Delivery

- Pre-assembled including adjustable foot
- Bolts / cage nut / washers (50 pcs.) and earthing set included

Description

- Basic frame of steel section / can be disassembled
- Socket, height 100 mm, RAL 7035
- Flat top of sheet steel with pre-cut perforations for brushes (included) and up to 6 fans
- Glass front door, sheet-steel rear door with 180° hinge
- Both doors fitted with swivel handle, hinge on right side
- Side panels made of sheet steel, can be removed
- Two 19" levels

unilan® high-density optical drawer
19"/2 U pivoting splice box OV-S
 equipped with LC/APC quad adapter

Product information

Application

unilan® 19" high-density optical drawer
 Pivoting high-density fibre splice box, 2 U for mounting into optical distribution frame
 144 patchings instead of 96 patchings in 2 U optical drawer
 Protection of pigtails during installation and splice welding
 With its dual function the optical fibre drawer can be used for left or right mounting

Dimensions

19" / 2 U, H x W x D: 88 x 498 x 305 mm

Delivery

- Housing and bend radius controls can be fitted on right- or left-hand side
- Pivoting module can be banded on both sides

Dimensions

Material of galvanised steel 2 and 3 mm powder-coated RAL 7035
 Weight approx. 6 kg
 Equipped with 36 quad adapters, 144 LC/APC pigtails and splice trays
 Cable entry right or left side possible (due to dual function)
 Cable exit left or right side possible (due to dual function)
 Retractable front and pivoting case
 Equipped with 2 wings for bend radius control on left and right side

417 358	Module insert	with 6 SCD adapter (blue) and 12 SC pigtails E09/125 OS2

Assembling module insert with splice holder and splice protection. Pigtails are prepared for splicing.
Please ask for further assembling inserts!

Product information

Application

The fibre optic patch panel is adjustable without additional equipment. It is telescopic, due to a telescopic bar. The cable mounting plate is already fitted in the case. The front plate will be delivered with a numbering and labelling strip. Simple handling during installation means very short installation time (cost saving)

Construction

Cover:	Aluminium with telescopic rails
Labelling:	1-24 on labelling tape
Mounting:	prepared for two splice trays possibility for max. 24 fibres
Dimensions:	19" 1U
Size standard:	44 x 483 x 280 mm
Size ETSI:	44 x 483 x 220 mm
Connecting system:	LSH Simplex, Duplex, Compact, each with angular outlet FC-PC

Fibre optic pre-assembly
unilan® FO Trunk
 factory made pre-assemblies
 of fibre optic cables

Trunk termination

Product information

Application

For the transmission of digital and analogue voice, video and data signals. The cable is prepared for laying using a special cover. The assembly is made to customer specifications. Cost saving and simple installation without expensive fibre optic equipment.

Features

Trunk termination

- optoversal® or other loose tube fibre optic cables from the optofil® product range
- Connector assembly with a coupler (screwable)
- For all current fibre optic connecting systems, protection class IP68
- The cable is prepared for laying using a special cover for toolless removal
- Possibility of assembling up to 144 fibres
- For a number of fibres greater than 48 the distribution head is cascaded
- Max. length of free cable is 2m (stepped)
- Assembly includes attenuation test report

A higher-strength protection tube is available.

Trunk termination (Item numbers are valid for one side)

Attention:

When ordering a trunk cable please ensure that the specified length of the trunk cable is defined by the length of the longest single optical fibre! This means that the total length of the trunk cable is the length of the cable between the splits plus the additional length of the single optical fibre on either side. You can find the length of the single fibre elements in the instruction manual.

Breakout assembly

Product information

Application

For the transmission of digital and analogue voice, video and data signals.
 The assembly is made to customer specifications.
 Cost saving and simple installation without expensive fibre optic equipment.

Features

Breakout assembly

- Breakout single fibre cable assembly
- Assemblies for all current fibre optic connecting systems
- The cable is prepared for laying using a special cover
- Single semi loose tube, stepped
- Assembly includes attenuation test report

optofil® outdoor cable / A-DQ(ZN)2Y

S-Micro (up to 96 fibres)

optimised for injection into microducts
nonmetallic, non-armoured, water tightness

Product information

Features Highly compact, metal-free, fibre optic outdoor cable containing up to 96 fibres with dry interstices and stranded loose tubes. Easily cut-back, installation-friendly cable construction.

Application Optimised for injection in to microducts of 7 mm and 10 mm diameter. Fibre to the Home.

Optical characteristics The cables are available with different types of fibre.

optofil® outdoor cable / A-DQ(ZN)B2Y

ZGGT 2500 HighP

central tube design, nonmetallic,
water resistant, rodent protected

Product information

Features

Robust, non metallic fibre optic outdoor cable with central tube design for up to 24 fibres. High tensile strength and high radial load strength for the highest transmission security. Installation friendly cable design. Rodent protection thanks to glass fibre armouring. Suitable for use in complex cable routes.

Application

Pulling or blowing through plastic ducts.
Laying on cable platforms and cable trays.
Direct burial.
Complex cable trays.

Optical characteristics

The cables are available with different types of fibre.

optofil® outdoor cable / A-DQ(ZN)B2Y

wbGGT HighP

nonmetallic, dry interstices,
water resistant, rodent protected

Product information

Features

Robust, non metallic fibre optic outdoor cable with stranded loose tube in one layer.
High crush resistance for high transmission reliability.
Easy handling cable construction by using dry interstices.
Non metallic rodent protection.
The 2 coloured ripcords are easy to identify for safe opening of the cable sheath.
HDPE sheath, easy to lay

Application

Pulling in or blowing through thermoplastic ducts
Laying on cable platforms and cable trays
Direct burial
Complex cable trays

Optical characteristics

The cables are available with different types of fibre.

optofil® outdoor cable / A-DQ(ZN)B2Y
wbGGT HighP (City Compact)
 nonmetallic, dry interstices,
 water resistant, rodent protected

Product information

Features

Compact, fibre optic outdoor cable ≤ 576 fibres for city and access network applications. Easy handling cable construction by using dry interstices. Non metallic rodent protection. The 2 coloured ripcords are easy to indentify for safe opening of the cable sheath. HDPE sheath, easy to lay.

Application

Optimised for injection into compact thermoplastic ducts K28/D32 (design 18x12) and K44/D40 (design 18x24, 24x12).

Optical characteristics

The cables are avaiable with different types of fibre.

Product information

Description

The micro duct is used for mechanical protection of optical micro cables. The outer structural wall is made from high density polyethylene (HDPE). The surface of the inner wall is of finely corrugated. The tubes are available in the outer diameter of 8 mm to 16 mm.

Packaging and Storage

Micro ducts are reeled on re-usable wooden drums and coils are wrapped in stretch film. The ends of the ducts can be protected with plastic caps preventing penetration of dust. The drum core diameter is 415 mm. The periphery width can be up to 10% bigger due to micro ducts being pressure-winded (drum width is measured from center of axis).

Article Nr.	Description	PU

Product information

Description

FTTH membrane-injection-house-inlet Ø 40-50mm

FTTH house-inlet as membrane-injection-system for direct installation in holes with Ø 40-50 mm, suitable for all common types of walls with wall thickness of 200-600 mm. Gas- and water-proof up to min. 1,0 bar. Including outer wall sealing with integrated multiple sealing for fibre cables, ducts of Ø 5 – 9 mm and Ø 9 – 12 mm – with blind membrane water-proof seal.

Article no.	Description	Set content	PU
344 636	Set of wall ducts 40 mm for inlet of up to 2 cables/ducts with Ø 5-7 mm, incl. corrugated pipe and extender resin. For holes with Ø 40-50 mm and wall thickness from 200-600 mm	10 pcs wall duct 10 pcs corrugated pipes 10 pcs extender resin cartridge 1 pc installation tool	1 set
344 637	Wall duct 40 mm for inlet of 1 cable/duct with Ø 9-12 mm incl. corrugated pipe and extender resin. For holes with Ø 40-50 mm and wall thickness of 200-600 mm	10 pcs wall duct 10 pcs corrugated pipes 10 pcs extender resin cartridge 1 pc installation tool	1 set

Description

FTTH membrane-Injection-house-inlet Ø 62-65mm

FTTH house-inlet as membrane-injection-system for direct installation in holes with Ø 62-65 mm, suitable for all common types of walls with thickness of 200-600 mm. Gas- and water-proof up to min. 1,0 bar. Including outer wall sealing with integrated multiple sealing for fibre cables, ducts of Ø 6-34 mm. Including outer wall sealing flange.

Article no.	Description	Set content	PU
344 638	Set of wall ducts 60 mm for sealing cables with Ø 30-34 mm (option to seal cables with Ø 6-30 mm by using interchangeable inserts) incl. extender resin For holes with Ø 62-65 mm and wall thickness from 200-900 mm	10 pcs wall duct 10 pcs extender resin cartridge 1 pc installation tool	1 set
344 627	LWL-corrugated pipe Suitable for FTTH house inlet 60 mm		1 pc.
344 629	Sealing-insert for duct/cables Ø 24-30 mm		1 pc.
344 630	Sealing-insert for duct/cables Ø 18-24 mm		1 pc.
344 631	Sealing-insert for duct/cables Ø 12-18 mm		1 pc.
344 632	Sealing-insert for duct/cables Ø 6-12 mm		1 pc.
344 633	Sealing-insert for duct/cables Ø 4x7 mm		1 pc.

Accessories

Description

Accessories to 40 mm – 60 mm house inlets

Article no.	Description	PU
344 634	Injection-gun for 2 components-resin	1 pc.

In-Line Closure FOSC

Product information

Application

In-Line Closure FOSC

The in-line closure FOSC is the environmentally sealed enclosure for fibre management in the outside plant network for aerial, underground or direct buried applications. It is a cold applied re-usable closure housing one mass splicing tray and cable attachment units. They fit perfectly well as a customer drop, tap-off or in-line splice closure in the low fibre count part of the network.

Features

- round cable ports are provided in a wrap-around block with pre-installed gel profile for cable sealing.
- Compatible with most existing cable constructions: e.g. loose tube, central core and minibundle.
- easy re-entry and re-closure mechanism with hinge and latches
- cold applied cable sealing based on gel technology
- integrated cable jacket gripping devices

Fibre optic Splice Closure FOSC

Product information

Application

Fibre optic Splice Closure FOSC

All sizes are designed for use with any cable construction (loose buffer tube; central core - or minibundle cable), in any environment (aerial, pedestal, buried, handhole, manhole) and for numerous splice applications (wcpressed, tap-off, branch and repair).

Features

- Base-to-dome seals on FOSC are mechanical for ease of installation and re-entry.
- Cable seals feature a new heatshrink sleeve and hot melt adhesive system that is installed with a hot-air-gun.
- The large oval port enabled to receive main distribution cable with a high number of fibres.

Fibre optic Splice Closure GCOG2

Product information

Application

Fibre optic Splice Closure GCOG2

The splice closures GCOG2 have a single-ended design and are compatible with most common cable types. The closures can be used as:

- splicing closure and branch tee
- coupling closure as an underground connection point
- distribution closure
- the FO-gel closure is suitable for storage in cable pits, in soil as well as attachment at masts, walls or racks.

Features

- 6 round cable ports are provided in a wrap-around block with pre-installed gel profile for cable sealing.
- Compatible with most common cable types: e.g. loose tube, central core and minibundle.
- Uncut fibres can be stored as single circuits in trays/or as cable elements in the storage space between the profiles.
- Storage baskets are available for mass storage of fibres of central core and minibundle cable constructions.

Fibre optic Sewage Closure SCO2

Product information

Application

Fibre optic Sewage Closure SCO2

This slim metal closure is specially designed to fit in small sewage canal systems and is therefore resistant to very aggressive environments.

Features

- Heat-shrinkable cable seals with 6 or 10 round entry/exit ports for drop cables and 1 oval port for looped(uncut) cable
- Uncut fibres can be stored as single circuits in SC trays, as single element in SE trays or as loose buffer tubes at the back side of the UMS profile.
- The FIST-SCO2 with 10 ports specifically developed for loose tube cable, whereas the FIST-SCO2 with 6 ports is compatible with most common cable types: e.g. loose tube, central core, minibundle.

FTTH cable 2.2 mm, LSOH

Coating buffer design,
flame retardant according to IEC 60332.1
in accordance to IEC 60794-2-20

Communication technology

Product information

Features

Easy handling fibre optic indoor cable
Very small outer diameter of 2.2mm in case of innovative coating-buffer
Flame retardant FR/LSOH cable construction with very low fire load
Robust coat for introduction in tubing plants with existing cables

Application

In-house cabling solutions for Fibre to the Home (FTTH) applications
In-house cabling solutions for integrated data network and building automation
Connection cable between building entrance facilities and fibre optic data outlet
Can be laid in cable trays, ducts and vertical shafts
Can be spliced in wall mounted distribution box and in fibre optic data outlet

Optical characteristics

The cables are available with the following types of fibre ITU G.657 A

Mechanical characteristics

temperature range	operation	-20 / +60°C IEC 60794-1-2 F1

Product information

Features

Electrically and mechanically high-quality Cat. 7 data cable - satisfying the highest demands! Excellent screen effect due to individual foil screened pairs and overall copper braid. Compatible with all current connecting hardware to EN 50173-1 and ISO/IEC 11801 2nd Edition. Guaranteed limit values according to Cat.7: ISO/IEC 11801:2002, EN 50173-1 and EN 50288-4-1. 2 fibres 9/125 µm, according to ITU G.657A, are protected by a loose tube 2,40 mm.

Applications

Data cable for structured premises cabling
For transmission of digital and analogue voice and data signals.
Especially suitable for all Class F applications.
ISDN, Ethernet 10 Base-T, Fast Ethernet 100 Base-T, Gigabit Ethernet 1000 Base-T, Token Ring 4/16 Mbit/s, TP-PMD/TP-DDI 125 Mbit/s, ATM 155 Mbit/s.
There is a possibility, of transmitting two different communication services (e.g., EDP + telephony, Ethernet + Token Ring) simultaneously over one cable (cable sharing).

Product information

Description and Application

Fibre optic distribution box with a wide range of applications. To be used as access, building and floor distribution box.

Features

- functional, slender and shapely box
- very robust construction (IP 54 and IK 08)
- various sizes (heights 255-1200 mm)
- various range of assembly
- all-purpose cable entry
- cable entry for loop cable
- multiple entry available
- strain relief via cable entry and quick cable installer for bundle cables

Pure FTTH data outlet

FTTH in combination with a copper module

Product information

unilan® FTTH data outlet UP / hybrid

Application

Hybrid data outlet suitable as OTO (optical telecommunication outlet) in FTTH networks and in combination with telephony/xDSL
 Suitable for new and old buildings due to data outlet offering.
 Flexible configuration and assembly options.

Description

Cover plate with window for labeling tag and safety sticker.
 Deposit space for up to 4 fibre pigtails, crimp and shrink splice protection 25 mm as well as for the cable divider of pre-assembled FTTH cables.
 Incl. protecting cover to prevent damage of fibres.
 Front dust covers for free FTTH plug-in stations.

Can be equipped with max. 2 LCD/APC couplers with integrated laser protection cover
 LC/APC pigtails G.657.A in colours red, green, yellow and blue

Dimensions

Data outlet UP:	88 x 88 mm, installation depth 42 mm

Product information

FTTH data outlet UP hybrid, without copper modules, incl. pigtails with semi-tight conductor 0.6 mm

Article no.	Description
309 379	1 x LCD/APC coupler / 1 x LC/APC pigtail G.657.A
309 370	1 x LCD/APC coupler / 2 x LC/APC pigtail G.657.A
309 371	2 x LCD/APC coupler / 4 x LC/APC pigtail G.657.A

FTTH data outlet UP hybrid, without copper modules, without pigtails, incl. couplers

Article no.	Description
309 374	1 x LCD/APC coupler Duplex
309 375	2 x LCD/APC coupler Duplex

FTTH data outlet UP hybrid, incl. BB x DSL module, incl. pigtails with semi-tight conductor 0.6 mm

Article no.	Description
309 380	1 x LCD/APC coupler / 1 x LC/APC pigtail G.657.A
309 372	1 x LCD/APC coupler / 2 x LC/APC pigtail G.657.A
309 373	2 x LCD/APC coupler / 4 x LC/APC pigtail G.657.A

FTTH data outlet UP hybrid, incl. BB x DSL module without pigtails, incl. couplers

Article no.	Description
309 376	1 x LCD/APC coupler Duplex
309 377	2 x LCD/APC coupler Duplex

FTTH data outlet UP hybrid, incl. telephony parallel module, incl. pigtails with semi-tight conductor 0.6 mm

Article no.	Description
309 381	1 x LCD/APC coupler / 1 x LC/APC pigtail G.657.A
309 382	1 x LCD/APC coupler / 2 x LC/APC pigtail G.657.A
309 383	2 x LCD/APC coupler / 4 x LC/APC pigtail G.657.A

FTTH data outlet UP hybrid, incl. telephony parallel module, without pigtails, incl. couplers

Article no.	Description
309 384	1 x LCD/APC coupler Duplex
309 385	2 x LCD/APC coupler Duplex

FTTH data outlet UP hybrid, incl. telephony separate module, incl. pigtails with semi-tight conductor 0.6 mm

Article no.	Description
309 386	1 x LCD/APC coupler / 1 x LC/APC pigtail G.657.A
309 387	1 x LCD/APC coupler / 2 x LC/APC pigtail G.657.A
309 388	2 x LCD/APC coupler / 4 x LC/APC pigtail G.657.A

FTTH data outlet UP hybrid, incl. telephony separate module, without pigtails, incl. couplers

Article no.	Description
309 389	1 x LCD/APC coupler
309 390	2 x LCD/APC coupler

FTTH data outlet UP hybrid, incl. telephony / Fast Ethernet module, incl. pigtails with semi-tight conductor 0.6 mm

Article no.	Description
309 391	1 x LCD/APC coupler / 1 x LC/APC pigtail G.657.A
309 392	1 x LCD/APC coupler / 2 x LC/APC pigtail G.657.A
309 393	2 x LCD/APC coupler / 4 x LC/APC pigtail G.657.A

FTTH data outlet UP hybrid, incl. telephony / Fast Ethernet module, without pigtails, incl. couplers

Article no.	Description
309 394	1 x LCD/APC coupler
309 395	2 x LCD/APC coupler

FTTH data outlet UP hybrid, incl. Fast Ethernet / Fast Ethernet module, incl. pigtails with semi-tight conductor 0.6 mm

Article no.	Description
309 396	1 x LCD/APC coupler / 1 x LC/APC pigtail G.657.A
309 397	1 x LCD/APC coupler / 2 x LC/APC pigtail G.657.A
309 398	2 x LCD/APC coupler / 4 x LC/APC pigtail G.657.A

FTTH data outlet UP hybrid, incl. Fast Ethernet / Fast Ethernet module, without pigtails, incl. couplers

Article no.	Description
309 399	1 x LCD/APC coupler
309 407	2 x LCD/APC coupler

for surface mounting

unilan® FTTH data outlet AP (surface mounting)

Product information

unilan® FTTH data outlet AP (surface mounting)

Description

FTTH data outlet for up to 4 fibres, set consisting of metallic mounting plate, box with integrated deposit space for connecting cable and pigtail fibre. Splice comb for ANT and shrink splicing. Available with 2 x SC/APC Simplex or 2 x LCD/APC coupler, incl. pigtails. Couplers with integrated laser protection cover. Box equipped with integrated dust covers for couplers.

Dimensions

Panorama Management Software Solution

Support of universal building,
technology and network management

Optimal planning by comprehensive function modules

Panorama a Datwyler solution

Individual solutions by deploying Panorama functional modules

Sites

- graphic and alphanumerical site management
- visualisation of imported CAD, GIS and Google Earth data
- area management information such as utilisation, energy consumption and cost data
- calculation and evaluation of site data

Buildings

- technical and commercial building management
- visualisation of imported CAD, GIS and Google Earth data
- facility management information such as heating systems, cabling infrastructures, climate and access control
- calculation of lease/additional costs
- visualisation of consumption data
- maintenance and service management by processes and workflows

Technologies

- facilities and devices visualisation and documentation
- device/array layout, configuration and operation via remote monitoring and remote control
- reports support fault management, deficiency analysis and asset management

Networks

- management and visualisation, from cable trays up to single optical fibre
- illustration of infrastructure including all logical connections
- workflow and task instructions for patch panel moves, adds, changes

Panorama is an universal management software, optimised for networks, technologies and buildings. The software can be deployed in many industries such as telecommunications, electrical engineering and finance.

Panorama supports the documentation of all objects to be recorded and the visualisation of all processes and workflows to manage these objects – including any generation of activities and assignment of tasks around the service and maintenance management as well as fault and alarm management.

Customised solutions

Processes, workflows

- processes and workflows for layout, installation and roll-out: support of maintenance and service intervals, fault and alarm management, IT Infrastructure Library (ITIL), et cetera

Resources

- coordination of staff, tools, equipment, machinery
- planning of maintenance and service activities
- free definition of resources and intervals

Control centre

- control centre function for building control, transportation and energy systems, production lines and further applications
- remote monitoring and remote control enable control of heterogeneous technology
- visualisation and monitoring of technical processes (Supervisory Control and Data Acquisition, SCADA)

Fault management and alarm systems

- incoming alarms ordered by priorities
- individually defined workflows enable to send emails, to create pop-up screens and to start assignments of tasks and processes

Development of individual solutions for technical and commercial building management

Some examples are:

- collection of metering data
- connection to facility management system
- benchmarking
- calculation and billing

Project approach to implement Panorama

Analysis	Design	Implementation	Roll-out
<ul style="list-style-type: none"> • needs/requirements • feasibility • concept • user requirement specifications 	<ul style="list-style-type: none"> • technical specifications • statement of work • interface definitions 	<ul style="list-style-type: none"> • software adaptation • interface adjustment • system check 	<ul style="list-style-type: none"> • roll-out to user
User requirement specifications	Statement of work	Acceptance procedure	Going live

Optional Datwyler support

- economic efficiency calculation
- project management, quality management
- training, documentation
- user support, maintenance, hosting

Datwyler services

Datwyler takes responsibility for all necessary services:

- implementation of Panorama software
- operation of Panorama software
- management of physical infrastructure based on an SLA

ICT Networks

Leading know-how

As a provider of total solutions for information and telecommunication networks, Datwyler possesses extensive know-how accumulated over decades:

- Almost 100 years of experience in cable production.
- Leading material, production and process know-how in the fabrication of copper and fibre-optic cables and components.
- Solid electro-technical competency.
- Close collaboration with renowned technical universities, international standards committees, and independent testing institutes.
- Broad systems competence.

Diverse applications

In the field of ICT networks Datwyler concentrates on communication infrastructures for public and commercial buildings and for FTTx networks. Some examples are:

- Office, industrial and exposition buildings
- Data centres
- Hotels and hospitals
- Stadiums, theatres, concert halls
- Airports and train stations
- FTTx projects of public utility companies and energy supply companies

In these market segments we can also flexibly meet individual customer requirements – up to and including turnkey and multi-site projects – with our cost-effective, modular system solutions and comprehensive services.

Complete system solutions

- unilan®: screened and unscreened copper system solutions (categories 3 to 7_A) for the transmission of voice, data, video, CATV, control signals and remote power (power over Ethernet, PoE).
- optofil®: innovative fibre-optic system solutions with single-mode and multimode optical fibres for indoor and outdoor applications, from LAN backbones to FTTH in-house cabling.
- Software solution for building, technology and network management.
- Extensive services ranging from consulting and planning via prefabrication, logistics and installation to system maintenance.
- Established worldwide, actively managed and certified partner network.
- Rigorous training and certification programme to guarantee optimal installation quality of our systems and solutions.
- 20-year warranty covering the entire system.

Focus on customer value

Datwyler stands for more than just the fabrication and distribution of products. For your ICT networks we offer future-proof, modular, customised one-source solutions for all your specific applications – as a uniquely attractive overall package, with all the necessary test certificates, authorizations and certificates and with long-term warranties.

The interaction of these elements creates added value. As a customer you benefit from maximum network availability and high investment protection, even with regard to future applications, expansions and changes.

Product Overview

Integrated, future-proof cabling solutions for ultimate reliability in Voice, Data, Video and CATV applications

More than just products

With the complete packages offered by Datwyler you are opting for comprehensive application-neutral and provider-independent system solutions encompassing the communication infrastructure for office and industry environments (unilan®) and for FTTx projects.

For Datwyler quality testing and quality management begin during the cable production process. Here relevant electrical and mechanical data are recorded on-line and automatically compared with the predefined specifications. Mostly these specifications considerably exceed current standards and drafts.

Datwyler follows the same procedure for the production of connection components, e.g. data outlets, patch panels and patch cables for copper and fibre-optic systems.

Marking of individual components ensures that data measured up to the time of production can be called up at any point in the future. This gives users or investors a high degree of certainty that the products used and manufactured provide the durability demanded by them.

Safety cable systems

Leading know-how

As a provider of total solutions for safety cable systems, Datwyler possesses comprehensive know-how accumulated over decades:

- Co-development of extended functional integrity tests in collaboration with renowned testing institutes in the early 1990s.
- Sound knowledge of safety engineering and building codes and standards.
- Leading material, production and process know-how in the fabrication of safety cables incorporating patented and proven ceramic technology.
- Development of the first metal-free fibre-optic cable with E30 extended functional integrity through combining existing technical competence in data and safety engineering.
- Broad systems competence.
- Collaboration with renowned technical universities, international standard committees and independent testing institutes.

Diverse applications

Datwyler safety cable systems with extended functional integrity are used wherever stringent fire-safety requirements must be met and people and property could be at risk due to fire and smoke:

- Airports, train stations, metro stations
- Hotels and hospitals
- Sports stadiums, theatres and concert halls
- Office and exhibition buildings, public buildings
- Tunnels for road and rail

Added value for fire-safety systems

System solutions

- The pyrofil® cable line includes halogen-free, low-smoke emission and flame resistant safety cables with circuit integrity and functional integrity.
- The pyrosys® product line includes support systems, mounting components and appropriate accessories to ensure functional integrity.
- optofil® Safety is the first metal-free fibre-optic cable with E30 extended functional integrity in accordance with DIN 4102-12.
- Fire protection seminars and special calculation programmes offer engineers and installers valuable support
- Comprehensive services up to and including turnkey and multi-site projects

Customer value in focus

Datwyler stands for more than the production and distribution of products. For your safety cabling systems we provide everything from one source: modular system solutions with high-quality cables and components, with all the necessary test certificates and authorisations and with long-term warranties. You can rely on our expert support for all aspects of our supply – beginning with planning, consultancy, through logistics, installation and ending with system maintenance. The interaction of these elements creates added value. As a customer you benefit from cost-effective installation thanks to our innovative installation methods, sign-off without any difficulties, low insurance rates, and dependable transmission of power and data even in the event of fire.

Safety concepts for building applications

Safety with pyrofil® cables and pyrosys® systems

Datwyler is the first European manufacturer to develop a system solution – pyrofil® and pyrosys® – that meets the demands of today's industry for reliable power supply and data transmission in the event of a fire. pyrofil® and pyrosys® is the result of many years of intensive development in coordination with the relevant standardisation bodies.

Selected raw materials and special compounds in combination with unique installation methods are what give pyrofil® and pyrosys® its high quality and maximum guaranty of safety in the event of a fire.

pyrofil® and pyrosys® is used wherever people, machinery and equipment are endangered by fire and smoke emission: in buildings with high density of occupants as well as in facilities containing large concentrations of valuable property.

pyrofil® safety cables and pyrosys® systems have to be highly reliable when it comes to practical operations. This is why Datwyler measures each and every product against strict quality standards before it leaves the company. Specifically, this means that all processes are integrated into the comprehensive management system according to ISO 9001 and ISO 14001. Beyond this, additional application-specific inspection and test methods ensure that pyrofil® cables and pyrosys® systems exceed the requirements of our customers as well as the stringent standards specified by the various countries in which our products are used.

Safety cables with improved characteristics in case of fire 		
<p>Low voltage cables up to 0.6/1 kV</p> 	<p>Safety cables with improved characteristics in case of fire – an alternative to traditional PVC cables, where no circuit integrity is required.</p>	<p>Single core cables from 1.5 to 630 mm² Multi core cables from 1.5 to 300 mm² Also available with mechanical protection and as flexible, oil resistant version.</p> <p>Standards/Approvals IEC, EN, CENELEC, DIN VDE, SEV, GOST-R</p>

System compatible installation components

System components

Application

Single clamps, multi cable supports

Single clamps to install single cables or cable bundles conforming to common practice.

Multiple cable supports for a cost effective installation of several cables.

These components facilitate the quick and easy retrospective/subsequent installation of cables.

Support systems

Special support systems to install several cables conforming to common practice. Approved for ceiling and wall mounting with possibility of easy retrospective/subsequent installation of cables.

Corresponding fixing devices, such as fire safety dowels, installation screws and setting tools are available for all support systems.

Connecting technology

Cable joints to connect pyrofil® safety cables with circuit and extended functional integrity.

Distribution boxes with extended functional integrity E30-E90. Also available as fire resistant covers to protect standard connections or junction blocks.

Distribution boxes with circuit integrity for high- and low-voltage cables.

Firestop systems

Firestop systems S90/S120

- Firestop coated board S100 P
- Intumescent firestop paint S100 D
- Intumescent firestop mastic S100 SM-K
- Firestop bricks TS 90
- Firestop plugs TS 90

Seminars

For further information please visit:
www.daetwyler-cables.com

Datwyler is setting new standards. pyrofil® safety cables combined with pyrosys® system components make up the perfect and cost effective safety solution.

Datwyler regularly holds seminars on cabling systems with integrated circuit and extended functional integrity as well as on firestop systems.

SIP door communication

Modern office and administration buildings require future-proof, adaptable electrical systems. Users are no longer willing to be restricted by non-flexible solutions. They demand 'plug-and-play' in the form of flexible control and automation of virtually every technical function of the building. With ecobus[®] KNX building automation by Datwyler, many building functions and systems such as HVAC, lighting, security and load management can be easily integrated. Control tasks can be done centrally, decentrally or automatically.

Maximum flexibility in installation

Leading know-how

As a provider of total solutions for the electrical and communications infrastructure of public and commercial buildings, Datwyler possesses leading know-how acquired over decades. Applying our competence in materials, production and processing in the fabrication of flat and round cables, we have developed the ecobus® system, a comprehensive solution combining flexible power distribution with control and automation of all building functions.

Complete system solutions

Decentral, modular and pluggable – with ecobus®, Datwyler offers sustainable system solutions tailored to changing customer needs, upcoming technologies and energy-efficient operation. Thus, ecobus® system solutions ensure high operational reliability and low operational costs.

Diverse applications

In recent years Datwyler has extended its proven ecobus® portfolio to include eight product groups for building automation based on the KNX standard. These product groups are used in system solutions for basic infrastructure as well as tenant improvements, including a wealth of applications such as responsive lighting, intelligent shading, HVAC, connections to third party systems, visualisation, power data metering and door communication via SIP. The product groups have a modular structure and can be deployed in any combination. This makes it possible to achieve a cost-effective solution

for every project. Combined with ecobus® flatform cable systems for power distribution and data transmission and with Datwyler's control and visualisation software which makes various systems available on one platform, the ecobus® product portfolio meets all requirements of intelligent building automation.

Customer value in focus

Datwyler stands for more than the production and distribution of high-quality products. For your technical building systems we provide modular total solutions from one source, including consulting, support, logistics, warranty and turnkey responsibility if required.

Integrating these elements into sophisticated attractive overall packages creates added value. As a customer you benefit from:

- drastically reduced cabling
- the use of factory-ready modules
- easier planning and documentation
- reduced installation time
- high flexibility, rapid changeability and adaptability
- higher safety due to lower fire loads
- cost-saving operation
- lower power consumption
- cost-effectiveness due to customized total solutions
- long-term investment protection

ecobus® Product Overview

System description

Modern building services installation calls for control and automation of the widest possible range of functions. Whereas conventional electrical building services installation merely distributes power and could be switched if necessary, the ecobus® system meets the higher standards demanded of modern building services.

Compared with conventional electrical installation, modern building management using ecobus® features a minimum of cable expenditure, rapid adaptability, and flexible use of space. This guarantees that your investment will retain its value for decades to come.

ecobus® enables the problem-free linking of a very wide variety of building services functions and facilities that have been strictly separated to date – such as heating, air conditioning, ventilation, lighting, building surveillance, and load management. Open and closed-loop control operations can be centralised or decentralised.

The flatform cables and appropriate pre-assembled plug-in and screw components make insulation stripping unnecessary and considerably reduce installation time. The installations can be modified or extended without any major planning effort.

The modular ecobus® product portfolio enables optimised system integration. The portfolio ranges from pre-configured plug-and-play solutions for decentralised systems, to cost-effective semi-centralised room solutions – e.g. for hotels, hospitals and office buildings – to total solutions for centralised building automation systems.

System ECO-C
products for the central, clear integration

System ECO-E
products for simple, economic integration

ecobus® Data flatform cable with ecobus® Data Adapter
outgoing circuit without insulation stripping for inter-connecting the sensors with flatform data transmission cables

ecobus® Combi Adapter 5x2.5+2x0.5
combined data and power output circuit for ecobus® Combi flatform cables

ecobus® Power 5x10 flatform power cable 5x10mm²
e.g. for power supplies

ecobus® Power I Adapter
power in- and output

ecobus® Power I 7x2,5+5x16mm²
for damp location, flatform power cable system
for engine rooms and industrial applications

System ECO-D
compact, plug-in KNX actuators with ecobus®
connection technology for fast, error-free assembly
in intermediate floors or suspended ceilings

ecobus® Combi
combined data and power flatform cable,
e.g. for lighting supply and switching operations

ecobus® Patch
pre-assembled patch cables
to connect consumers and to supply
office actuators

System ECO-B
products for the
decentral, modular
integration

**KNX IR
Remote Control
ECO-E ZN1IR**

**ecobus® Power 5x10
with ecobus® Power 5x10 Adapter out**
power output circuit for ecobus® Power
5x10mm² e.g. pre-assembled with floor
boxes and output circuit fuse

KNX sensing device
twofold, fourfold

ecobus® Data data cable

ecobus® Data-R data cable

Platform cable systems and accessories

System ECO-E

Products for simple, economic integration

Highly functional, but easy to-integrate KNX products with innovative features for central room functions.

System ECO-F

Products for flexible, efficient integration

High-quality user interfaces with touch-sensitive tactile zone and multitouch function. Standard push-button sensor, KNX touch panel and EnOcean Wireless sensors.

System ECO-M

Products for Smart Metering

Meters for electrical energy with standardised communication interface, network coupler and versatile temperature sensors for different applications.

System ECO-T

Products for IP door communication

SIP Module System and SIP Doorstations for door communication via IP network.

Door Camera Steel

SIP Door Module ECO and Maxi

Push Button Modules

SIP Door Station IP54

SIP Door Station IP54 Video

KNX Power Supply

Multi-functional Actuator 4 x 10 A

Multi-functional Actuator 6 x 10 A

Multi-functional Actuator 4 x 16 A

Universal Dimming Unit 400 VA

3-Phase Energy Meter Direct- and Transformer-connection Communication Interface e.g. KNX, M-Bus, et al.

KNX 3-Phase Energy Meter

KNX 3-Phase Energy Meter

KNX Network Interface

KNX Touch Display

Analog/Digital Input 4-fold

RS232 Interface (Pronto)

Air Conditioner Controller

KNX Sentido Interface
KNX Push Buttons
EnOcean RF Push button

KNX Room Temperature Sensor

KNX Contact Temperature Sensor

KNX Data Logger

Frames and Housings for the Module System

IR Remote Control

NTC temperature sensor

Touch sensitive Sentido 2-fold

Touch sensitive Sentido 4-fold

Optical reading device

M-Bus reading software

LAN Secure Adapter

Elevator cable systems

Unnoticed by elevator passengers, elevator cables by Datwyler do their job around the world every day. They reliably transfer power and data between the elevator cabin and the control system. Withstanding great mechanical stress, they provide faultless operation round the clock. No wonder Datwyler elevator cables are installed in the fastest elevators and the highest buildings in the world.

Power and data for modern elevators

Space in cities is limited. High-rises are being erected around the globe. Elevators with ever greater performance are providing rapid access to the upper floors of these tall buildings. And so the requirements for the materials used are becoming increasingly tougher. As a leading manufacturer of elevator cable systems, Datwyler knows the needs. Not only must international standards be met, but knowledge of customers' specific needs is essential. Our reliable elevator cable systems are known for smooth operation that adds significant comfort to the ride.

Leading know-how

Using various test methods, some of which were developed by Datwyler, we develop elevator cables for service under the toughest conditions. Our specialists define materials and designs that even under permanent dynamic loading show no signs of fatigue. We also offer halogen-free materials for special fire-safety concepts.

Diverse applications

Datwyler elevator cable systems meet every requirement for electrical connections to the elevator cabin. Aside from power cables, high-grade data transfer cables are being increasingly requested. Integral fibre optic cable can easily handle integral large volumes of data. These modern system solutions connect the elevator cabin to the controls and to the local data network – so passengers can enjoy television and video services in the elevator.

System solutions

dynofil® is our total system solution (including services) for electrical installations for elevators.

Customer value in focus

Datwyler has developed innovative system solutions for electrical installations for elevators. Comprehensive harnessing and logistics services with modern B2B connectivity round off the service offering of Datwyler.
